

Fig. 1

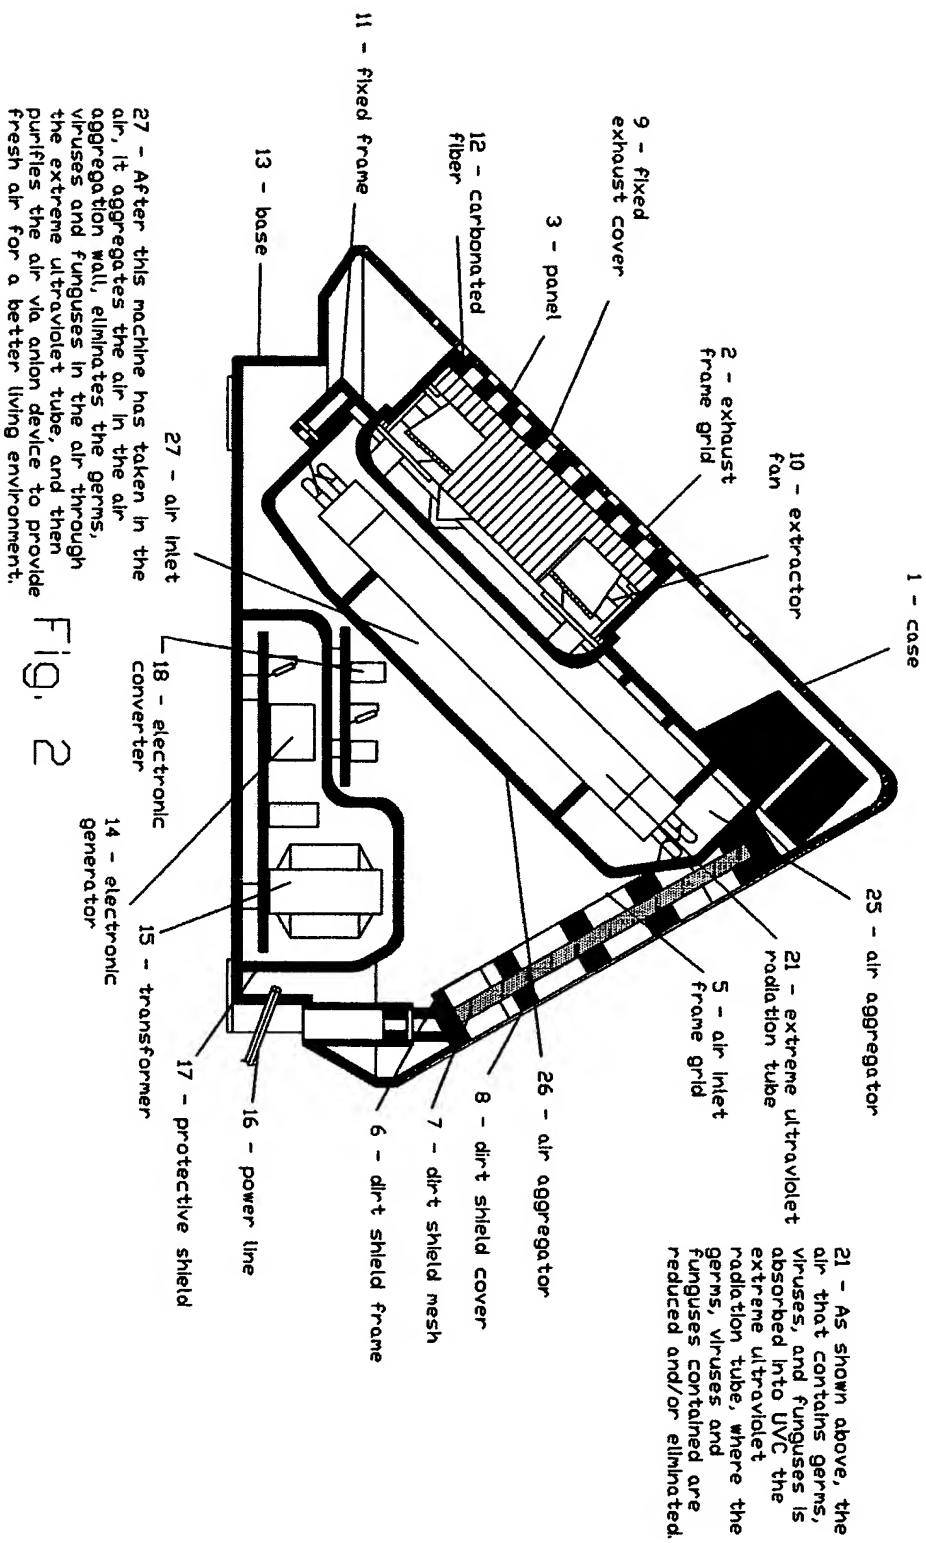

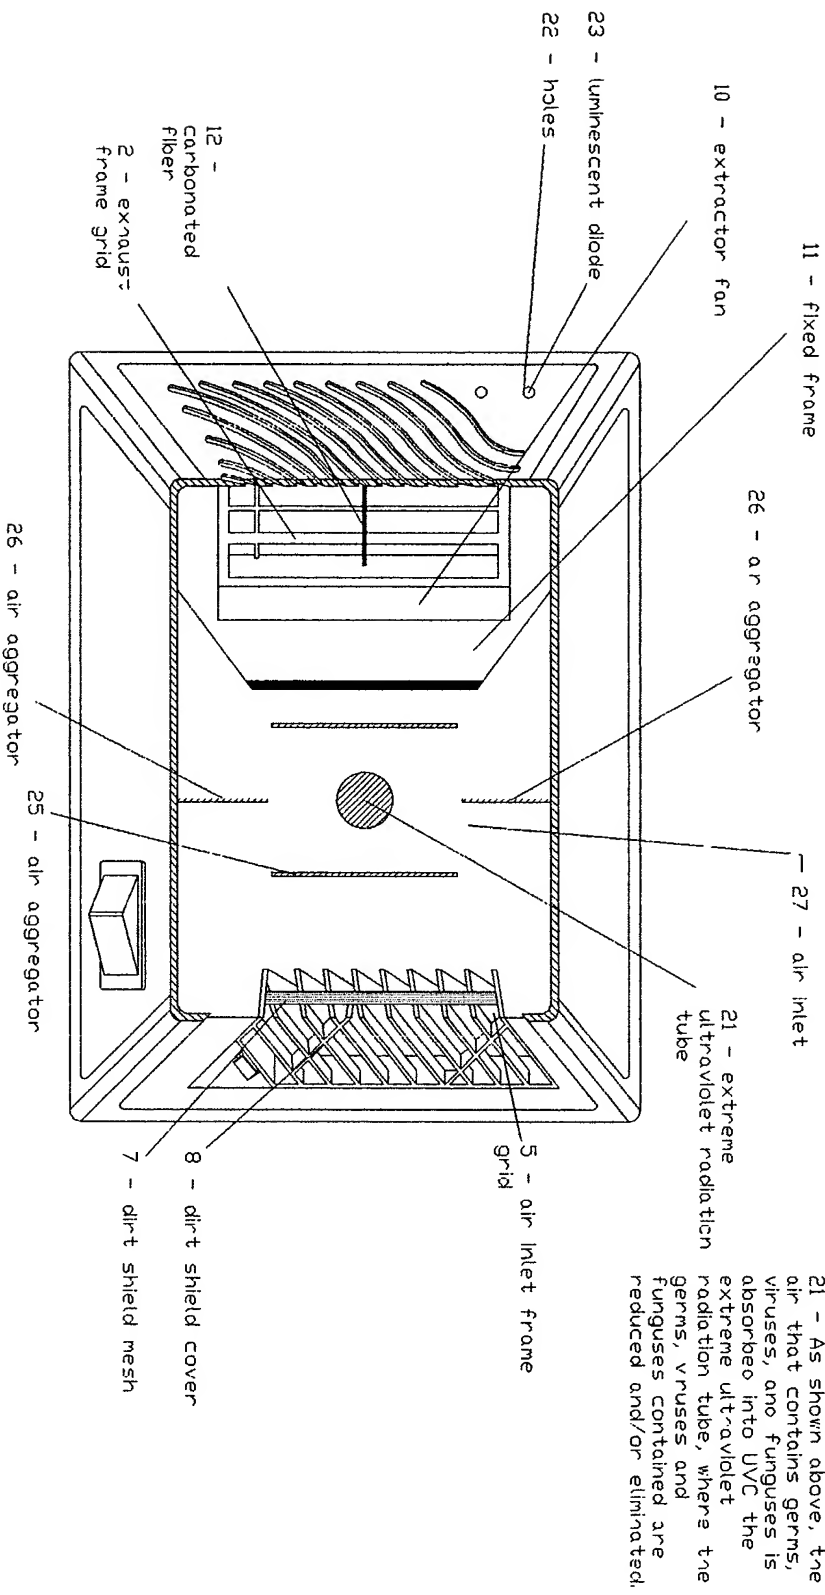

Fig. 2

27 - After this machine has taken in the air, it aggregates the air in the air aggregation wall, eliminates the germs, viruses and fungi in the air through the extreme ultraviolet tube, and then purifies the air via anion device to provide fresh air for a better living environment.

21 - As shown above, the air that contains germs, viruses, and fungi is absorbed into UVC, the extreme ultraviolet radiation tube, where the germs, viruses and fungi are contained and reduced and/or eliminated.
